

Cinematize 3 Pro is the best-in-class software for extracting and converting clips from a DVD. Users can locate precise locations on the DVD and export them directly in file formats compatible with iPhone, iPad, H.264, and 3GP phone movie. The extracted segments can also be used in video editing software, as part of compilations on DVD, and as still pictures.

The complex process of DVD clip extraction has been simplified down to three steps. First, using the preview screen, the user selects the start and end points for each clip, and selects the various settings (video codec, de-interlacing, audio sample size, output format, etc.). Second, additional clips, with the same or different settings, are added to the Extraction List. Third, the Extract Data button is clicked and the conversion commences. \$149.95 for the boxed version, \$129.95 for the download.

### PulpMotion Advanced 3.2.1 (MAC)

PulpMotion Advanced 3.2.1 is a highly sophisticated, yet easy-to-use, software application for creating compelling, eye-appealing, animated slideshows. The program provides more than one hundred professionally created theme templates that simplify the workflow, reducing it to a drag-and-drop operation. The user can import or drag-and-drop photos, videos, and music to create stunning presentations with animated titles, text effects, transitions, simulated page-turns, filters, the Ken Burns effect, photo zones of interest, and much more. An informative introductory video can be viewed at <http://www.aquafadas.com/en/pulpmotion/index.php#timing>.

Completed presentations can be shared across a complete spectrum of output options, including YouTube, iPhone, Apple Mail, iDVD, iWeb, GarageBand, iPod, AppleTV, and more. A trial version is available at <http://www.aquafadas.com/en/pulpmotion/adv/download.php>. \$129
